

Summary of Intercalation rules:

Essentially what we are doing every year is starting each New Year on the closest 4th day (Wednesday) to the Spring Equinox (or the First Day of Spring). The Full Moon is simply our witness which helps us determine which years have the closest 4th Days to the Spring Equinox. Since Yah's Calendar only utilizes 364 days every year, we drift backwards on our calendars by 1 day (for 365-day years) or 2 days (for 366-day Leap Years). If we don't adjust our 364-day calendar by intercalation this coming Spring, then in only a few more years, we are going to be way off with our timing with Mother Nature and we will be disturbing the 4 Seasons (the 4 Intercalary Days) for their correct timing. The Moon calendars will have the 4 seasons off of their proper timing by up to a month sometimes before they get adjusted by them adding in another (13th) month. Enoch and Moses are clear that every year has 12 months. Read Jubilees Chapter 6, where it shows moon calendars will have each New Year coming in 10 days too soon. (Solar 364 days vs Lunar 354 days)

Enoch tells us the Full Moon is our witness that brings in all the years...but we are not to start our years either too far forwards or too far backwards of the Spring Equinox (First Day of Spring). Since we want to start every year on the closest 4th day (Wednesday) to the actual First Day of Spring, Abba gave us the Full Moon at the time of the Spring Equinox as our sign or witness for intercalating on the correct years. In other words, we might go astray a year or so if we don't wait for the witness of the Full Moon for when we are to intercalate. If there will not be a Full Moon somewhere in the 7 days that we are to run (non-counted) off the clock, then we know we have the wrong year to intercalate. The Full Moon witness is very precise (faithful) and she will show up every 3 or 5 years without fail at the time of the Spring Equinox and so we can actually predict for thousands of years when we are to intercalate if we know her cycle.

Unlike predicting the moon calendars New Months, we don't have to look for any slivers or conjunctions and then if it happens to be cloudy on certain days, we would simply start a New Year by default on the following day (a Lunar Day 30). Abba does not need our help deciding when the New Year is to begin. There will either be a Full Moon or there won't at the time of the Spring Equinox and that is our witness. We can calculate our calendar for many years in advance and know exactly when the Full Moons are going to happen. Moon Calendars are fickle at best and celebrating Abba's Feasts on the correct days all depend on if the New Moon was seen in Israel or not. That is very unreliable. I know that when we were following Michael Rood's Moon Calendar while living in Oklahoma, we would see the sliver of the New Moon very clearly on the days that it was not seen in Israel. Also know that **Abba's Calendar in Heaven is written on stone tablets**. Does He rely on slivers and conjunctions or does He keep His Calendar EXACTLY THE SAME, EVERY SINGLE YEAR FROM CREATION TO THE NEW CREATION? That would be a YES! He doesn't have to make New Stone Tablets each year. Like He does, we also use the same calendar year after year. We change the pagan dates...Abba changes nothing!

So, at the beginning of every new intercalation year (which is every 5, 6, or rarely 8 years), the Full Moon will be located somewhere in those 7 days that we are to run off the clock. For example, this coming Spring we will run the following 7 days off the clock and they will not be

included in the 364 days: March 16, 17, **18**, 19, 20, 21, 22 and then we begin our New Year on Wednesday, March 23, 2022. The Full moon will be on March **18** as our witness that we have the correct year.

At the **BEGINNING** of each new intercalation cycle, we will start our New Year about 3 days **AFTER** the Spring Equinox (March 20) has already occurred, like it will be on March 23, 2022 of this coming year, after we adjust. **(The pagan Gregorian is not an accurate calendar and the New Year does not start on January 1.)** Then, when this upcoming 5 or 6-year cycle is toward its **END**, we will once again be starting the new year about 3 days **BEFORE** the Spring Equinox occurs and it will again be time for another intercalation. (For example, this current 364-day year, we started the New Year on **March 17**, 2021, which was **3 days BEFORE Spring (March 20)**. It was the closest (4th Day) Wednesday to Spring, but after we intercalate on **March 23, 2022, we will be starting our New Year 3 days AFTER Spring**. It will also be the closest 4th Day to the Spring Equinox.

Notice in our calendar pdf that if we don't intercalate this coming Spring, we would be starting our New Year on March 16th. That would be **4 days away, and BEFORE the actual Spring Equinox, which will occur on March 20th**. So, when we intercalate this next Spring, **we will still be starting our New Year on the closest 4th Day Wednesday to the Spring Equinox, but it will be AFTER the Equinox has already occurred, and it will only be 3 days away from the Equinox of March 20. In other words, (the 3 days away) on Wednesday, March 23 (after intercalation of 7 days) will be one day CLOSER to the Vernal Equinox of March 20 (First Day of Spring) than the (4 days away) on Wednesday, March 16. The Full Moon on March 18 will simply be our witness to show us that we have the correct year to jump from one Wednesday over the Spring Equinox to the next Wednesday, for the start of the New Year.** We can also employ sundials as a great confirmation tool for using as another witness that will show the exact day of the Equinox.

So, to repeat for clarity, by intercalating this coming Spring, we will still be starting on the closest 4th Day Wednesday to the Spring Equinox (only 3 days away). Enoch tells us not to go too far forwards or too far backwards and we have the **Full Moon** as our witness to give us complete confidence that we have the correct year to intercalate.

Notice in our calendar pdf charts that each of the next few years from now, going forward, we will be getting closer to the Equinox year by year for the start of each New Year (**3,2,1**) and then for 1 year (**0**), we will actually start that year on the Equinox (First Day of Spring). Then the next couple of years after that we will drift away in the opposite direction again until Miss Moon shows up and tells us to jump back over to the other side of the Equinox again. So, we truly are always starting every New Year on the Closest 4th Day Wednesday to the First Day of Spring. We are never more than 4 days away and that only occurs about one time per century when we need an 8-year correction cycle.

Enoch gives us very precise numbers of days between Full Moon events of 1092 days (3 years), 1820 days (5 years) and 2912 days (8 years). We never intercalate after only 3 years, but we believe the 3-year intervals do mark the 366-day Leap Years, which on Abba's Calendar appear to be every 3 or 5 years. Leap Years do not affect our intercalation process of waiting for Miss Moon as our witness. They simply show us when we accrue 2 days on certain years.

We will be discussing 48-hour days shortly and I will be requesting help from some of you, to record the exact days on which they occur. This is when the sun will take a double orbit in the same pathway. I will take pictures of the simple process I am using and I want others to help in case I have cloudy days when it's critical or vice-versa and many witnesses will put the matter to rest. 48-hour days are either real or they aren't. There is scripture to back it up and also Enoch says the sun has exactly 364 pathways and that is all.

So, the Full Moon (at Spring (Vernal) Equinox) is simply our witness who tells us when we have the correct year to go from when we are starting our years **before** the Equinox... to jumping back over the Equinox and starting our new cycle again **after** the Equinox has occurred. Then each year we will drift backwards again by either 1 or 2 days every year until Miss Moon gives us her witness again in an eternal cycle until the End of Days. Hopefully I didn't repeat myself too many times, but without a visual presentation, I wanted to help everyone grasp the concept of how and why we intercalate. Perhaps I will be able to do videos again if I don't need to return to work.

But the best way to remember intercalation is:

1. Start every New Year on the closest Wednesday to the First Day of Spring.
2. Have Miss Moon as your faithful witness to tell you when to "leap frog" over the Equinox from one Wednesday to the next Wednesday and don't count those 7 days on your 364-day calendar. Keep the Sabbath like normal.

The beauty of Abba's Calendar is it's a perfect 52-week cycle that allows us to keep our Feasts and Sabbaths on the exact same days of the month and days of the week each year. We can memorize the calendar because it will never change. The 4 Intercalary days are always on 3rd Day Tuesdays. The First Day of every new season is always on a 4th Day Wednesday. You can memorize every feast date and Sabbath date. We haven't changed our basic calendar structure since the beginning in 2016, but we simply change the pagan, Gregorian dates each year so we can do business until Messiah returns. I don't think Y'shua will be using the Gregorian Calendar during His Millennial Reign, and we will likely be able to carry around the same copy of Abba's Calendar year after year. Of course, Abba's Calendar is written on Heavenly Stone Tablets but that might be a little cumbersome to carry copies of that around in our pockets. Abba does not ever need to change His Calendar that was written into stone... It is the same Yesterday, Today, and Forever.
